1) The user interface is designed for normal business usage, large rulesets, high number of users or interface assignments may be less practical.

All measurements are based upon TCP traffic unless stated otherwise. Maximum PPS is a peak performance, measured using 500 byte packets.Firewall Port
to Port package per seconds is the peak performance when using 1500 byte sized packages. Total Firewall Throughput is calculated by multiplying the maximum packets per second with a standard package size of
1500bytes. IPS performance is measured with aproximately 35000 rules enabled. IPsec VPN is measured using AES256GCM16+SHA512. Concurrent sessions are based upon memory available, where one state consumes
1KB of memory and 1GB of memory is reserved for system tasks. Latency is measured using netperf.
